

Vaccination Protocols for Cats

The F4 vaccination protects cats against feline calici virus, feline rhinotracheitis (feline herpes virus), panleucopenia and feline *chlamydia psittaci*.

Kittens - 1st vaccination at 8 weeks or older with Fel-o-vax 4
2nd vaccination 4 weeks later with Fel-o-vax 4

Adults - Annual vaccination with Fel-o-vax 4

All previously unvaccinated cats require 2 doses of Fel-o-vax 4 given 4 weeks apart for full protection against cat flu

Fel-o-vax 4 is safe to use in pregnant cats.
