

Vaccination Protocols for Rabbits

RABBITS

Cylap vaccine against haemorrhagic viral disease (calicivirus)

First vaccination at 10-12 wks, then 6 monthly vaccination

If first vaccination is given prior to 10 weeks of age then give 2nd injection
4 weeks later and repeat every 6 months

Cylap can be given to pregnant rabbits

*** Please note that there is no vaccine available to protect rabbits against Myxomatosis (MYXO) which is a kind of pox virus that affects rabbits. This virus is spread by mosquitos.
