## Reproduction Programs: Ovsynch + Pregnecol Program

The addition of Pregnecol (ECG) to the Ovsynch program on Day 7 with PG improves pregnancy rates especially in fresh cows and in older cows (>5 years old).

- Day 0 - 1ml GnRH in the am
- Day 7 - 2ml PG and Pregnecol injection in the am
- Day 9 - 1 ml GnRH in the pm
- Day 10 - Fixed time artificial insemination in the am

Pregnecol comes as a powder in a 15-dose pack and a 50-dose pack. Once it is mixed up it needs to be used straight away. It is not advisable to store it for future use.
